

Introducing Bettercoin: The first Smart cryptocurrency

Bettercoin, the groundbreaking smart cryptocurrency, presents a big market opportunity with its revolutionary transactional intelligence capabilities. By incorporating automated algorithms within the cryptocurrency, BETTER ensures the highest level of security, akin to having a microchip embedded on each ticket in a face-to-face transactions.

1. **Overview:** Traditional cryptocurrencies like Bitcoin, Ether and others, simplifying the explanation, are decentralized and encrypted codes stored in a blockchain ledger. However, they face challenges such as high price volatility driven by dominant investors, irreversible transactions leading to potential loss of funds, and exposure to cybersecurity risks and regulatory uncertainties.

Bettercoin addresses these challenges with its innovative Transactional Intelligence technology:

- Intelligent Pricing: Bettercoin employs an automatic "relative value index ratio" pricing mechanism, impervious to human influence. It leverages the global demand for Bitcoin and Ether, dynamically adjusting its price to rise with the most prominent crypto and resist falls.
- Recovery Assurance: Bettercoin enables direct transfers between owners and buyers with complete peace of mind. If a payment is not received within 10 minutes, the owner can retrieve their BETTER.
- Compensation and Mining: Each Bettercoin transaction rewards users with mined BETTERS in their wallets as compensation for the commissions paid, including a significant portion of the blockchain's GAS.

RECOVERY

COMPENSATION

2. **Performance in 6 months:** BETTER has already demonstrated its primary strengths during its initial months:

- Steady price growth
- Resilience to Bitcoin and Ether price declines
- Upward volatility
- Highest security in every transfer between users

3. **Buying and Selling:** Users can easily buy and sell BETTER from their wallet using three methods:

- **Direct buying and selling:** Owners can sell directly to buyers without paying any commissions. The buyer needs to send ETH from their wallet to the PayForBetter.eth platform to release the received BETTERS. Owners can recover their BETTER if payment is not received within 10 minutes.
- **Quick purchase and sale:** In this method, users can engage a Bettercoin Delegate, an individual with a dedicated Metamask wallet for selling

Bettercoin cryptocurrency. The owner transfers the desired amount of BETTER to the Delegate's wallet. Upon receiving the BETTER, the Delegate automatically receives UNPAID, and ETH_PAY tokens. The ETH_PAY token serves as a payment order indicating the price in ETH for the received BETTER. Unlike the buyer, the Delegate does not process the payment directly. Instead, the Delegate transfers all ETH_PAY tokens received to the buyer's wallet. The buyer then completes the transaction by sending the ETH specified in the payment order to the **PayForBetter.eth** platform. This is the only one official platform ensures a seamless process by automatically paying the owner 95% of the transaction value in ETH and providing a compensation mining reward of 5% in BETTER. Upon the next sale, the owner has the option to sale the BETTER received as compensation. The platform also automatically pays the Delegate 4% in ETH and provides a compensation mining reward of 1% in BETTER. Ultimately, the platform earns 1% in ETH.

This method ensures secure and efficient transactions between buyers and sellers through an intermediary who cannot affect the price, who also in net terms does not imply a commission cost.

- Automated buying and selling: In 2024, the **XBETTER.ETH DEX** (Decentralized Exchange) will be operational, enabling global buying and selling of Bettercoin through an order book that automatically matches bids and asks. The DEX charges a commission percentage defined by the platform. Similarly, the **XFIRST.ETH DEX** with a regulated bidding system will allow users to send BETTER without double transactions (BetterCash) and receive online offers to buy, with the ability to accept or reject and receive appropriate returns in ETH or BETTER.
